## The different data storage options available on Android:

- **1. Shared Preferences:** Store private primitive data in key-value pairs.
- 2. Databases: Store structured data in a private database.
- (a). SQLite: Android provides full support for SQLite databases. Any database you create is accessible only by your app.
- The data is not naturally accessible to other apps.
- **(b). Firebase:** It is Google's mobile platform that provides real time database.

## **SharedPreferences:**

- 1. Similar to a Map i.e. Key-Value pairs.
- 2. Android stores Shared Preferences setting as XML file.
- 3. It is application specific.

#### Modes:

- MODE PRIVATE
- MODE APPEND
- MODE\_WORLD\_READABLE
- MODE\_WORLD\_WRITABLE

## **Initialization:**

SharedPreferences pref = getApplicationContext().getSharedPreferences("MyPref",Context.MODE\_P RIVATE);

Editor editor = pref.edit();

## **Storing data:**

```
editor.putString("key_name", "string value"); // Storing string editor.putInt("key_name", "int value"); // Storing integer
```

editor.commit(); // commit changes

## **Retrieving Data:**

pref.getString("key\_name", null); // getting String

Clearing or Deleting Deter

pref.getInt("key name", -1);

**Clearing or Deleting Data:** 

editor.remove("name"); // will delete key name

// getting Integer

editor.remove("email"); // will delete key email

editor.commit(); // commit changes

# Firebase

## What is Firebase?

Firebase is a powerful platform for your mobile and web application. Firebase can power your app's backend, including data storage, user authentication, static hosting, and more. With Firebase, you can easily build mobile and web apps that scale from one user to one million.

## Authentication

- Authentication & account management
- · Supports:
  - · Email & password
  - Social providers
  - · Existing auth systems

# Realtime Database

- · Cloud-hosted NoSQL database
- Synchronization & conflict resolution
- · Access directly from your app

- · Easy file storage
- · Handles poor connectivity
- Backed by & accessible from Google Cloud Storage

- · Simple UI, with no coding
- Built on Cloud Messaging
- Audience targeting
- Conversion funnel insights
